

FI GL

The glass car operating panel and landing control station. It's a matter of style.

Benefits at a glance

- Modern, progressive design
- Latest technology
- User-friendly operation
- Quick installation
- Easy to clean
- Card reader can be integrated

A modern look

It's not only Schindler lift cars that look great – so do our panels. The best proof of this is our FI GL glass panel. It is made from bright, back-printed glass and lends any lift a progressive, modern look. The buttons are touch-sensitive, making them not only elegant in design but also easy to use.

Latest technology

The inner values are just as appealing as the outer ones: The FI GL glass panel is a state-of-the-art unit. It ensures reliable, clear and straight forward communication with the passenger and meets the requirements for existing lift systems both as a car operating panel and a landing control station.

Practical options

We can also offer you the following options to match the design:

- Key-operated switches can be mounted on the car operating panel for functions such as access to certain floors.
- The card reader can also be used for restricting access to certain floors. It is installed invisibly behind the glass panel and therefore offers the highest possible security. The data for authorising the cardholder and the destination floor is stored on the card and checked automatically.
- A voice announcement device installed in the car operating panel makes it easier for people with impaired vision to use the lift.
