

# FI MXB

## The practical car operating panel and landing control station. For greater convenience.

### Benefits at a glance

- User-friendly operation
- Timeless design
- Quick to install, even with existing panel or station cutouts
- Complies with European safety standards
- Excellent price/performance ratio

### Straightforward communication

Panels in lifts have to do one thing above all: They must ensure reliable, clear and straightforward communication with the passenger.

Our FI MXB panel satisfies these requirements to an optimum degree – and not only as a car operating panel but also as a landing control station. It offers simple functions that passengers can immediately understand, and is easily legible. It is a convenient and absolutely user-friendly solution.

### Reliable operation

The FI MXB panel fits just right. With its timeless design, it blends harmoniously into any car and any architectural scheme. It meets European safety regulations for existing systems, it is suitable for use by people with disabilities and can be equipped with Braille script as an option. It is even possible to install a microphone and loudspeaker for a 24-hour dedicated emergency line.

### Quick installation

The FI MXB panel can be installed anywhere. It is either let into the wall to be flush with the surface or can be quickly and easily surface mounted. Special fabrications are also possible: We make them to cover existing panel cutouts directly. This is an excellent solution – with almost no need for renovation or alteration work of the existing building.
