## Solid design

Panels in lifts have to do one thing above all: They must permit absolutely reliable, clear and straightforward communication with the passenger.

Our FI MXH panel satisfies these requirements to an optimum degree – and not only as a car operating panel but also as a landing control station. It offers simple functions that passengers can immediately understand, and is easily legible. It is a convenient and absolutely user-friendly solution. This solid version also satisfies discerning customers.

## Easy to operate

The FI MXH offers the passenger a logical structure and is easy to operate. It meets all safety regulations for existing systems, it is suitable for use by people with disabilities and can be equipped with braille script as an option. A Schindler Servitel remote emergency call system can also be fitted.

## Quick installation

The FI MXH panel can be installed anywhere. It is either embedded in the wall to be flush with the surface or can be mounted on the surface. Quickly and easily. Special fabrications are also possible: We make them to fully cover existing panel cutouts. This is an excellent solution – with almost no need for alteration work on the building.

**Schindler**

## Long service life

We take care to achieve the highest possible quality when manufacturing the panels. This means high-quality materials and leading technology for a long service life. Take a look – you'll be convinced.
